

4.9GHz TO 5.85GHZ LOW NOISE AMPLIFIER WITH ENABLE

Package Style: 2.2mmx2.2mmx0.5mm

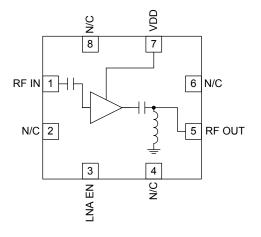

Features

- 4.9GHz to 5.85GHz Operation
- 2.3V to 4.8V Single Supply
- 1.6dB Noise Figure
- 11dB Typical Gain

Applications

- High Band WLAN LNA/Driver
- General Purpose Amplifier for Portable Applications

Functional Block Diagram

Product Description

The RF5515 is a high performance Low Noise Amplifier design for 802.11a applications (4.9 GHz to 5.85 GHz) and other portable consumer electronics. This miniature LNA features a high dynamic range and high intercept point with low current consumption around 12 mA. The LNA is DC blocked and internally matched to 50Ω at input and output pins. The IC is featured in a 2.2mmx2.2mmx0.5mm module compatible plastic package.

Ordering Information

RF5515	4.9GHz to 5.85GHz Low Noise Amplifier with Enable (Sn-Pb finish)
RF5515PCK-410	Fully assembled evaluation board and 5 piece loose samples

Optimum Technology Matching® Applied

🗌 GaAs HBT	□ SiGe BiCMOS	🗹 GaAs pHEMT	🗌 GaN HEMT
GaAs MESFET	Si BiCMOS	Si CMOS	RF MEMS

Absolute Maximum Ratings

Parameter	Rating	Unit		
DC Supply Voltage (No RF Applied)	6.0	V		
DC Supply Voltage (RF Applied)	5.25	V		
Maximum Input Power (No Dam- age)	10	dBm		
Operating Temperature	-30 to +85	°C		
Storage Temperature	-40 to +150	°C		

Exceeding any one or a combination of the Absolute Maximum Rating conditions may cause permanent damage to the device. Extended application of Absolute Maximum Rating conditions to the device may reduce device reliability. Specified typical performance or functional operation of the device under Absolute Maximum Rating conditions is not implied.

RoHS status based on EUDirective 2002/95/EC (at time of this document revision).

The information in this publication is believed to be accurate and reliable. However, no responsibility is assumed by RF Micro Devices, Inc. ("RFMD") for its use, nor for any infringement of patents, or other rights of third parties, resulting from its use. No license is granted by implication or otherwise under any patent or patent rights of RFMD, RFMD reserves the right to change component circuitry, recommended application circuitry and specifications at any time without prior notice.

Parameter	Specification		Unit	Condition	
Farameter	Min. Typ. Max.		Unit	Condition	
Typical Conditions					Temp=25°C, V_{DD} =3.3V, LNA_EN=3.3V, Frequency=4.9GHz to 5.85GHz unless otherwise noted in the condition column.
Frequency	4.9		5.85	GHz	
LNA Voltage Supply (V _{DD})	2.7	3.3	4.8	V	
LNA Enable Voltage (LNA_EN)	2.5		4.8	VDD	LNA Enabled
		0	0.2	V	LNA Off
LNA Current					
LNA V _{DD}	6	12	20	mA	LNA in "On" state, over operating temperature range, Full V_{DD} range, full LNA_EN range, and full frequency band.
	0		5	μА	LNA in "Off" state
LNA Enable			200	μΑ	
Gain					
LNA in "ON" State	8	11	14	dB	Over full operating temperature range, full V _{CC} range, Full LNA_EN range, and full frequency range.
Noise Figure					
LNA in "ON" State	1.2	1.7	2.4	dB	Over Full V_{DD} range, full LNA_EN range, Full frequency range, and over operating temperature range.
Passband Ripple	-0.5		+0.5	dB	RX Mode, LNA ON
Input P1dB	-4	-1		dBm	Over operating temperature range, full voltage range, full LNA_EN range, and full frequency range.
RF OUT Port Return Loss			-9.6	dB	4.9 GHz to 5.85 GHz
RF IN Port Return Loss			-9.6	dB	4.9 GHz to 5.85 GHz
RF OUT RX Port Impedance		50		Ω	No external matching

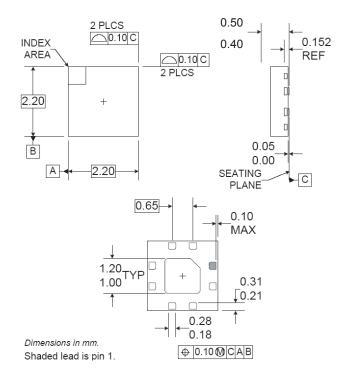

rfmd.com

Pin	Function	Description
1	RF IN	RF Input. Input is matched to 50Ω and DC block is provided internally.
2	NC	No Connect
3	LNA_EN	LNA Enable. Voltage which is a high impedance pin could require bypassing depending on the nature of the sup- ply voltage and the layout.
4	NC	No Connect
5	RF OUT	RF Output. This pin is matched to 50Ω internally and it is a DC short to GND. See functional block diagram for more details.
6	NC	No Connect
7	VDD	Supply Voltage for the LNA circuit. It is recommended that bypass capacitors are placed on this voltage line as needed depending on the nature of the supply voltage and layout.
8	NC	No Connect
Pkg Base	GND	The center metal base of the QFN package provides DC and RF ground as well as heat sink for the amplifier.

Application Schematic - 4.9 GHz to 5.85 GHz

PCB Design Requirements

PCB Surface Finish

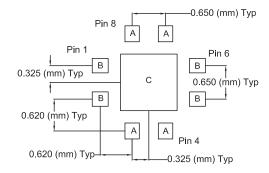

The PCB surface finish used for RFMD's qualification process is electroless nickel, immersion gold. Typical thickness is 3 microinch to 8 micro-inch gold over 180 micro-inch nickel.

PCB Land Pattern Recommendation *

PCB land patterns for RFMD components are based on IPC-7351 standards and RFMD empirical data. The pad pattern shown has been developed and tested for optimized assembly at RFMD. The PCB land pattern has been developed to accommodate lead and package tolerances. Since surface mount processes vary from company to company, careful process development is recommended.

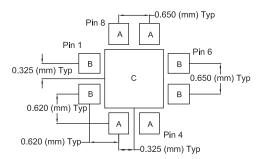

PCB Metal Land Pattern

PCB Solder Mask Pattern

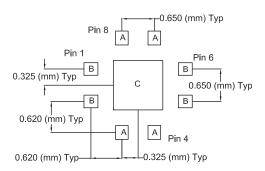

PCB Stencil Pattern

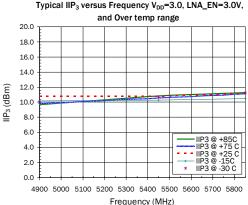

A = 0.25 x 0.28 (mm) Typ B = 0.28 x 0.25 (mm) Typ C = 0.99 (mm) Sq

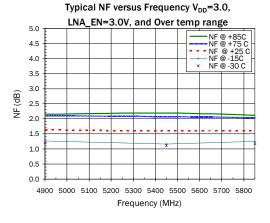

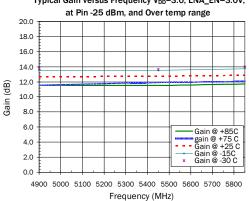

Note: Thermal vias for center slug "C" should be incorporated into the PCB design. The number and size of thermal vias will depend on the application. Example of the number and size of vias can be found on the RFMD evaluation board layout.

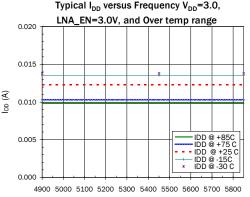

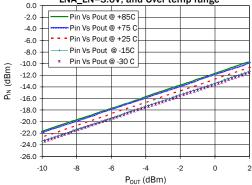

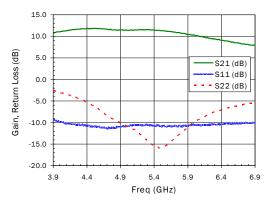

Frequency (MHz)

Typical S-Plots at V_{DD}=3.0, LNA_EN=3.0V
